AUTOMATED SDLC SECURITY SCANNER

Security Assessment Report

Pipeline Run — a883dff9bf1f302abfe5d7b5e837adce9e77b3dd

Project Automated SDLC Security Scanner

Author Victor Omusi — University of San Diego, CYBR 516

Generated 2026-04-08 09:41 UTC

Pipeline SAST · Secrets · SCA · Container · DAST · Policy Gate

Status ⚠ POLICY STATUS UNKNOWN

1. Executive Summary

This report presents the results of a fully automated security assessment of the intentionally vulnerable target Flask application conducted by the Automated SDLC Security Scanner pipeline. The pipeline integrated five security stages — static analysis (SAST), secrets detection, software composition analysis (SCA), container image scanning, and dynamic application testing (DAST) — producing **1134 deduplicated findings** across all stages.

⚠ **Policy Gate: UNKNOWN — Gate result unavailable for this run.**

152	412	387	140	43
CRITICAL	HIGH	MEDIUM	LOW	INFO

1134	0
TOTAL	HEALTH /100

Pipeline Health Scorecard

0/100 — High Risk

Score deducts 20 points per CRITICAL finding, 5 per HIGH, 1 per MEDIUM. A policy gate failure caps the score at 40.

2. Tool Coverage Summary

The following table summarizes finding counts by tool and severity band after deduplication across the full normalized output set.

TOOL	STAGE	RAW INPUT	CRITICAL	HIGH	MEDIUM	LOW	INFO	TOTAL
trivy	Container	2853	152	405	363	120	43	**1083**
semgrep	SAST	13	—	5	1	—	—	**6**
bandit	SAST	13	—	1	2	4	—	**7**
trufflehog	Secrets	3	—	1	—	—	—	**1**
zap-fullscan	DAST	41	—	—	21	16	—	**37**

3. Findings Table

All 1134 deduplicated findings sorted by severity. Deduplication key: CWE identifier + file path + line number.

4. MITRE ATT&CK Mapping

The following table maps DAST findings from OWASP ZAP to MITRE ATT&CK technique identifiers. Mapping is heuristic — ZAP does not emit ATT&CK IDs natively. Each technique represents the most applicable adversary behavior enabled by the identified vulnerability.

No DAST findings with ATT&CK mappings available for this run.

ATT&CK mappings sourced from Pipeline/Dast/attack-mapping.json. MITRE ATT&CK Enterprise Matrix v16.1. Mapping limitations are documented in the coverage_notes section of the mapping file.

5. Policy Gate Detail

The policy gate evaluates aggregated findings from all pipeline stages against configurable severity thresholds defined in `Pipeline/Policy/policy.yml`. A non-zero exit code from `evaluate.py` blocks deployment. The SHA-256 hash of `policy.yml` is verified at runtime against the value stored in GitHub Secrets (SRQ-002).

This report was generated automatically by the Automated SDLC Security Scanner pipeline. Findings represent automated tool output and should be validated by a qualified security analyst before remediation prioritization. Automated scanning cannot detect business logic flaws, race conditions, or authentication-context vulnerabilities. Victor Omusi — Shiley-Marcos School of Engineering, University of San Diego — CYBR 516.
